Dividing

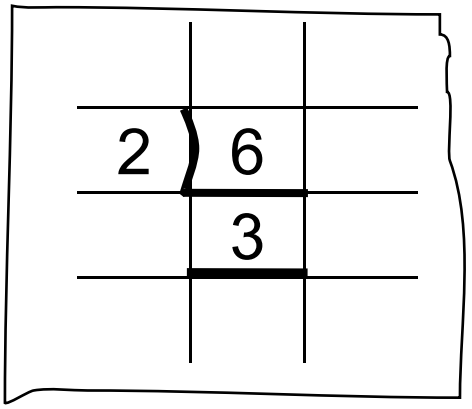

Here are two ways of writing 6 divided by 2

$6 \div 2$

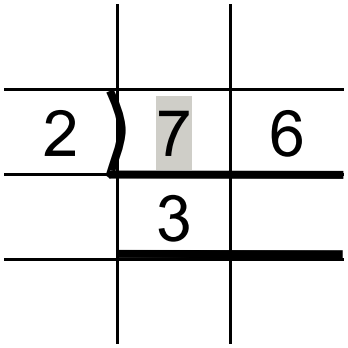

We write in the answers as:

$6 \div 2 = 3$

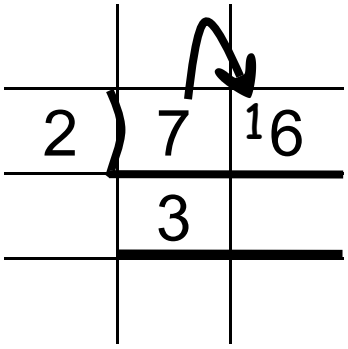

The second method can be used for more difficult divides. Here is an example of how we could do 76 divided by 2.

Two into 7 goes 3 remainder 1

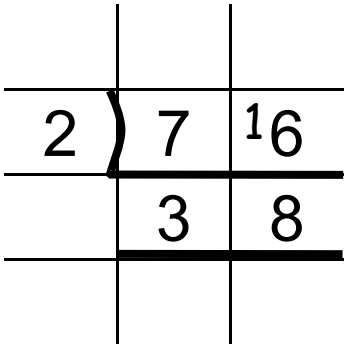

www.brain-cells.co.uk

Take the remainder and write it in front of the 6

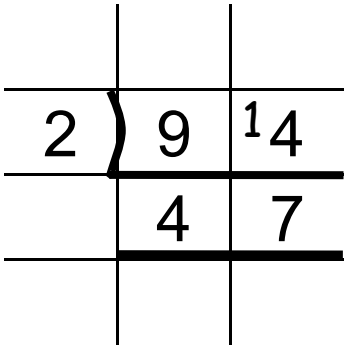

Now, divide the 2 into the 16. It goes 8 times

The answer is 38

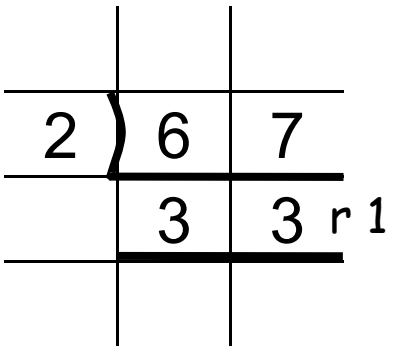

Here is another example showing how 94 could be divided by 2

Here is another example showing how 67 could be divided by 2

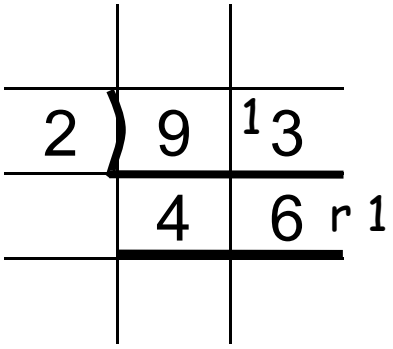

2 goes into 6 three (3) times with no remainder

2 goes into 7 three (3) times with a remainder of 1. We write this at the end

Here is another example showing how 93 could be divided by 2

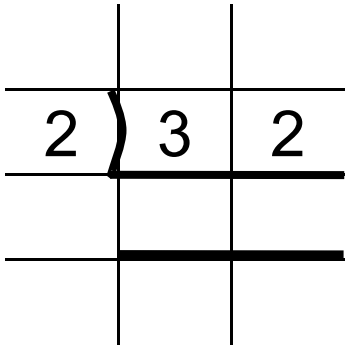

2 goes into 9 four (4) times with a remainder of 1

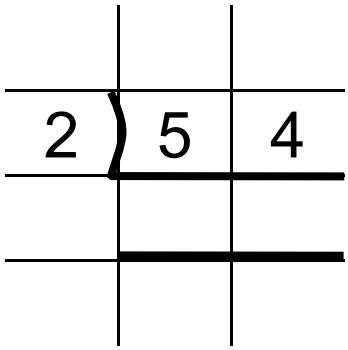

2 goes into 13 six (6) times with a remainder of 1. We write this at the end
